TIMER DIGEST, P.O. Box 1688, Greenwich, CT. 06836 -1688 (203) 629-3501

Eduardo Mirahyes - 2015 Timer of the Year

Eduardo Mirahyes's investment experience spans 32 years, from vice president and portfolio manager at the #1 Money Manger in the country, to running a small hedge fund. When the Market Crashed in 1987, Mr. Mirahyes served as vice president and portfolio manager at GAMCO Investors, in New York City, the top-ranking money manager in the US for six of the seven previous years. In the aftermath of the Crash, the value of assets under management plunged well over 30%, and clients representing a third of the firm's assets, walked out the door.

Obviously, the traditional *Graham & Dodd "value approach"* had little worth in a Market Crash. Almost overnight, his income dropped 50%, to force him to tighten his belt. To avoid such an excruciating experience ever again, Eduardo set out to learn everything he could about the Market. He began his quest by studying the Great Depression, the Austrian School of Economics and after several years, arrived tangentially to *Market Wizards* and its sequel, *Market Wizards II*. The only common thread between five of the top traders interviewed by Jack D. Schwager was the *Elliott Wave Principle*, applied either as a primary or confirmatory tool.

Mirahyes immediately took action, to enroll in the Basic Elliott Wave Course taught by Elliott Wave International. When the course materials arrived, they included *The Elliott Wave Principle* along with a set of video tapes containing the entire basic course. For over a month he studied them diligently. By the time he arrived in Gainesville, GA, he knew enough to skip the basic course and go right into the Advanced Tutorial, to gain a year's head start on the way to mastery. To date, Mr. Mirahyes is still the

only individual who has *ever* skipped the Basic Elliott Wave Course entirely, to successfully complete the Advanced Tutorial.

For the next two years, Eduardo charted the S&P 500 real-time, on the 1-minute increments each day, from the opening bell to the close. He would then print and scotch-tape together the 7 sheets of 8.5 x 11" landscape paper to learn fine-tune his perceptions. The benefit of such exercise was to gain the equivalent of 20 years experience, in just two. In the meantime, Eduardo read every book put out by Elliott Wave International (EWI) and returned to Gainesville several times.

Eduardo's life's work, entitled *New-Wave Elliott™* is a highly advanced and refined version of RN Elliott's legacy - and the product of 25 years' market analysis. It is available free of charge via these links: [Part 1](#) & [Part 2](#). Obviously these discoveries are invaluable in the current market environment.

By reconciling Benoit Mandelbrot's *fractal* insights with Nobelist, Robert Shiller's *Century of Market Values* within an Elliott framework, Eduardo filled-in the missing pieces, to enable the construction of RN Elliott's previously *theoretical Channel*, and thereby confirm *New-Wave Elliott's™* veracity as the true *cutting-edge tool for forecasting, market analysis and swing trading excellence*.

Elliott's previously Missing Pieces

Among the missing pieces required to reconstruct Elliott's theoretical Channel were the discovery of the magnitude-transcending pattern and its precise location. Although RN Elliott was on the right scent, there were more

insights to be gained by other levels of analysis. The next of which was the bullish *Diag II*. It was a structure discovered by Hamilton Bolton in the 1950's, became a Bear Market pattern as the reciprocal *Diag II*, to indicate the beginning of a long Bear Market. What's more, there is no 5th wave. After magnitude transcends in the 4th impulse wave, each 5th wave becomes the 3rd wave of the next higher degree. With these insights and Robert Shiller's Data on Market values, it became obvious that rather than a 3-year Bear Market spanning 1929 to 1932, *Supercycle Wave (II)* had initiated with the panic of 1906, 23 years earlier.

Eduardo's aptitude for *pattern recognition* and his track record for excellence in Bear Market *declines* remains noteworthy. Only Bear Market performance is relevant to today's Bear Market. In fact, a long track record is indicative exclusively of Bull Market performance. Only recent the Bear Market performance from January 2008 to March 2009 is relevant indicator of future Bear market returns.

Exceptional Bear delivers 2-3 trading updates per week via email, for 8 asset-class ETFs, along with the Timer Digest S&P signal, used by many to successfully trade S&P Futures.
