

Exceptional Bear Market Letter

October 24, 2008

Swift upside gains of 50%+

In the **Dow**, the rally should just breach the dashed line at 11,000, before dropping back a second time. Analogously we are coiling a spring tightly, so that when released it jets out like rocket. These ups and downs are inherent in a Bear Market, if you hold like a Bull, you'll be back to zero. The rally on the starting blocks is far stronger than the investing public imagines. Most have lost hope and sold near the bottom. The general expectation is for continued downside....that's the way it always is just before a major break-out. By now all the sellers have sold, and there's lots of cash on the sidelines. With just a little buying, short sellers are squeezed and a self-perpetuating rally begins. Like a movie of a landslide played in reverse, we swiftly reach the next peak, above Dow 11,000. That's 30% in the Dow, while many others in our model portfolio will see gains of 50-200%, most likely in 30 days or less.

The next move is up big, you don't want to miss it. We continue to offer a 30-day money back guarantee, so there's no risk. [Click here](#) to give us a try. Last week we provided our tracked performance, which you can access in last week's Market Letter. In the meantime, here's a testimonial, which elegantly simplifies how to make the most of our signals.

"I really appreciate being one of your subscribers. I think my 3 months is up Nov. 18th and I want to re-subscribe for a year for that discount. You asked me what my goals were when I subscribed. These 1st 2-1/2 months have been the first time since March 2000 that I can get up each day and feel I got a chance to see my retirement accounts increase. I don't expect daily increases, I've lost money since March 2000. But now I've made money since early September, when I first started using your trades. I work all day and am not able to check emails until noon Pacific. Then when I'm having lunch, I grab my Blackberry and look at your emails and simply position myself on the "trader side" of your model portfolio. If you don't post a different position by 12:45 Pacific, I stay with the day before. Simple, and over this time I'm way ahead.

Let me just add that although I simply use your recommended long or short "trader" positions before the close, I always look forward to your charts and educational material for fun reading in the evenings or on the weekends. Thank you for giving me some control over my future, instead of feeling I'm at the mercy of others.

You obviously don't need subscribers to make a great living. But your willingness to bring along carpenters, and whoever else wants to come along means a lot to me."

Thanks again,

*Regald Laird
Beaverton, Oregon*
